LEED® 2009 Green Building Rating System

Early in 2009, the USGBC introduced *LEED* v3, which is made up of three parts: *LEED* 2009 (advancements to the *LEED* Rating Systems), a new *LEED* Online, and a new building certification model. The *LEED* 2009 Green Building Rating System is a set of performance standards for certifying the design and construction of commercial, institutional and multifamily residential buildings, both public and private. The intent is to promote durable, affordable and sustainable materials and processes during the design and construction of the built environment. The Rating System includes products for New Construction & Major Renovations, Core & Shell Development, Existing Buildings, Operations & Maintenance, Schools and Commercial Interiors.

Prerequisites and Credits in the LEED 2009 Green Building Rating System Address Seven Topics:

Sustainable Sites (SS)
Water Efficiency (WE)
Energy & Atmosphere (EA)
Materials & Resources (MR)
Indoor Environmental Quality (IEQ)
Innovation & Design Process (ID)
Regional Priority (RP)

Prerequisites and Credits for each of the Seven Topics covered in the *LEED* Rating System products, are project rather than product focused. Therefore it is the cumulative effect of products integrated within building systems and assemblies and evaluated within the parameters of each of the topics, that contribute to the "points" a project accrues during the certification process.

Owens Corning LEED® 2009 Credits Guide

Owens Corning products contribute to many LEED 2009 credits. A product listing, including qualifying credits and construction type, is featured below. The key below details the qualifying construction type(s) for each credit.

- ALL** – Qualifies for ALL construction categories
- A** – New Construction & Major Renovations
- B** – Core and Shell Development
- C** – Schools
- D** – Existing Buildings: Operations and Maintenance
- E** – Commercial Interiors
