

**MortarNet®**  
Mortar Droppings Protection

**Product Description**

For masonry cavity-wall construction. Made of tough polyester mesh (2") and nylon (0.4" and 1"), its trapezoidal shape captures and breaks up mortar droppings on two levels so they can't form a solid dam. In addition, its 90% open-weave mesh provides multiple pathways for water to flow around mortar droppings to the flashing.

**Short Form Spec**

Provide trapezoidal shaped MortarNet® to suspend mortar droppings at unequal heights; allowing moisture to drain from the cavity and maintain airflow within the cavity wall.

The trapezoidal shaped MortarNet® is a 90% open mesh, 2" (50.8 mm) polyester, 1" (25.4 mm) or 0.4" (10.16 mm) nylon thickness. The Insect Barrier™ is a densely woven membrane attached to the face of the MortarNet®. Provide one or more thicknesses as required to fill cavity width. Install per manufacturer's instructions.

Product: Subject to compliance with requirements, provide trapezoidal shaped MortarNet® with Insect Barrier™ as manufactured by Mortar Net Solutions.™

**Manufacturer**

Mortar Net Solutions™  
326 Melton Road, Burns Harbor, IN 46304  
Telephone: (800) 664-6638  
Fax: (219) 787-5088
