

WeepVent™ Weep Hole Protection

WeepVent™ for masonry cavity walls helps ensure that moisture can migrate out and air can circulate into the cavity, and that insects can't enter the cavity through the weep holes. The product's compressibility means it can completely fill the weep holes, and its unique "prickly adhesion" holds the weep vent in place without fasteners or adhesives.

- 90% open-weave polyester mesh allows moisture to move freely from the cavity to the building exterior
- Highly air permeable to help ventilate the cavity and may be used at the top of the wall to improve air circulation in the cavity
- Will not oxidize, support mold or fungus, or react with common building materials, and is treated with a flame-retardant (test data available on request)
- Fast and easy to install in both new construction and restoration projects
- Prevents insects and debris from blocking the weep holes or entering the cavity
- Very lightweight and easy to handle
- Slightly compressible for a snug, permanent fit without adhesives or fasteners
- 100% compatible with standard weep hole designs
- Extremely durable for optimal long-term performance

Available in Brown, Red, Tan, Almond, Gray, White.
Custom sizes and cuts available on request

The CavityComplete® Concrete Masonry Unit (CMU) Wall System excludes the masonry veneer and concrete masonry units. A detailed list of the components is available at www.CavityComplete.com.
