

SE1200 HP BOOST PROFITABILITY

SE1200 HP single-end Type 30™ roving is a compelling solution designed specifically for knitting and weaving with the versatility to work well in filament winding, pultrusion, and LFTP applications.

- Produced with patented Higher Performance glass by Owens Corning, the product provides superior mechanical properties with the excellent corrosion-resistance expected from our Advantex® formulations.
- Multi-resin compatibility, with strong bonding in polyester, vinyl ester, and polyurethane.

HIGHER PERFORMANCE AND PROCESS FLEXIBILITY FOR WEAVING, KNITTING, FILAMENT WINDING, AND PULTRUSION

Product Benefits

Excellent Processing

• Smooth run-out combined with low fuzz properties results in smoother parts and less downtime for cleanup, enabling higher efficiencies and lower manufacturing costs.

Multi-Process & Multi-Resin Compatibility

· Flexibility for use with standard weaving looms, multiaxial knitting machines, filament winding, and pultrusion.

Increased Productivity and Part Quality

• Fast, uniform strand wet-out leads to higher glass loading and good adhesion, resulting in optimized part production speed, which supports increased productivity and better-quality finished parts.

Reduced Cost

- Fast, uniform strand wet-out leads to higher glass loading, reducing resin demand.
- Fast wet-out also increases production speed and productivity, resulting in reduced manufacturing cost.

Enhanced Service Life

• Compared to standard E-glass, Higher Performance is an E-CR glass that provides longer service life in applications facing corrosion, and possesses high-fatigue properties to help qualify for wind energy.

Applications

SE1200 HP is designed for use in the manufacture of knitted or woven glass fabrics used for transportation applications, pultruded central strength members for fiber optic cabling, filament wound pipe, and tanks for liquid transport or energy storage.

Technical **Characteristics**

The following data were generated by comparing Higher Performance SE1200 HP to standard SE1200, using an aromatic amine/epoxy resin system and an unsaturated polyester resin system, respectively. Sample preparation and fiber weight fraction were controlled to create comparable data.

| 2200 | 225 | |
| 2400 | 206 | |
| 4400 | 113 | |

Rovings are available in a single-end internal-pull package. Pallets are stretch-wrapped for load stability and for protection to aid strand run-out and transfer. Pallets are available in bulk or Creel-Pak™ pallet packaging format, depending on region.

Labeling

Each individual package is labeled with information including product name, Tex/yield, producing plant, and production date.

Storage

Unless otherwise specified, it is recommended to store glass fiber products in a cool, dry area. The glass fiber products must remain in their original packaging material until the point of usage. The product should be stored in the workshop, within its original packaging, for 48 hours prior to its utilization, to allow it to reach the workshop temperature condition and prevent condensation, especially during cold weather. The packaging is not waterproof. Be sure to protect the product from the weather and other sources of water.

It is recommended that the product be used for manufacturing in resin within 18 months. Ideal conditions are at a temperature between 8°C and 26°C and a relative humidity of 70% or less.
