

# SUSTAINA® LOOP SINGLE-END ROVING INNOVATION BEYOND PERFORMANCE

Manufactured from a combination of pre-consumer circular glass fibers and traditional glass input materials, SUSTAINA® Loop is just one of our responses to protecting the planet without compromising product performance.

- Available in up to 100% Circular Glass Fiber via an ISCC+ certified mass balance process
- Sized to match the performance and characteristics of Owens Corning® Type 30® products designed for pultrusion, long fiber thermoplastics applications, and more

## What is SUSTAINA® Loop

Just like E-glass and ADVANTEX®, SUSTAINA® Loop is an advanced glass technology created by Owens Corning as an input material for our fiberglass products.

## Performance and Compatibility

We use SUSTAINA® Loop to manufacture a range of products including Type 30® Single-End Rovings designed for pultrusion and long fiber thermoplastic applications.

[View compatible products.](#)

## Features and Benefits

SUSTAINA® Loop is sized with the appropriately engineered, polymer-compatible organic coating for pultrusion and long fiber thermoplastic applications of your choice. SUSTAINA® Loop matches the performance of the products you already know and use.

The only difference is that SUSTAINA® Loop products are certified via an ISCC+ mass balance approach with circular glass fiber grades up to 100%. The raw material meets the definition of waste or residues, i.e., was not intentionally produced and modified or contaminated or discarded, to meet the definition of waste or residues (applicable to waste and residues and products produced from those).

## Manufacturing

Currently, SUSTAINA® Loop Glass is produced at the Owens Corning L'Ardoise, France facility using pre-consumer circular glass fibers and traditional glass input materials.
