Conwed Designscape | Wall Technology is an Industry Leader
in custom designed acoustics for large venues across the nation. Whether you need an acoustic design that blends in or one that adds visual flair through color and style, we have the expertise and manufacturing skills to make your vision a reality. Conwed Designscape helps you complete your project on time and on budget, so your venue is up and running.

Conwed Designscape is a subsidiary of Owens Corning, a global Fortune 500 company with approximately 15,000 employees in 27 countries, and a name trusted by builders, architects, and acoustic consultants around the world. With world class resources, we have the design expertise and production capabilities that are needed to service national accounts and large, complex projects.

Let Our Design Improve Your Facility:

- Healthcare
- Educational
- Religious
- Offices
- Conference Rooms
- Galleries
- Reception Rooms
- Executive Suites
- Shopping Centers
- Hotels
- Banks
- Theaters
- Sports
- Lobbies
Sound Solutions
Across the country, facilities like yours turn to Conwed Designscape for acoustic solutions tailored to their venue, whether the room needs a nearly seamless, uniform appearance or a bold display of color and design. The science that goes into our design, construction, and finish options makes us your one-stop acoustics resource for one of the best in durability, aesthetics, and sound control. Conwed Designscape products can be easily installed to enhance sound quality, minimize noise distractions, increase the ability to concentrate, and improve speech intelligibility. Our innovative products are all custom-made to meet your specific requirements.

A Long History
The Conwed Designscape legacy includes the acoustic insulation for Charles Lindbergh’s Spirit of St. Louis and as pioneers in the open office concept, installing the first free-standing acoustic office dividers.

Industry Leader
Conwed Designscape can meet specific acoustic, aesthetic, and architectural challenges. Our custom-designed products provide added flexibility in solving those challenges. We offer a wide variety of acoustical core materials, finishes, sizes, shapes, thicknesses, and mounting options. Our acoustic core materials meet ASTM-E84 requirements and are tailored with Class A fire-rated fabrics and vinyls or painted finishes. We also test our products for reliability under the rigors of daily use. Precision measuring and cutting takes place at our facility, so your panels, baffles and clouds arrive onsite, ready to install.

Proven Products
You may have already experienced our diverse offering of acoustic solutions in facilities across the nation, including the Smithsonian Museum of the American Indian, Paccar Hall School of Business at the University of Washington, the Armed Forces Retirement Home in Washington, D.C., and The Children’s Museum in Indianapolis. As one of the largest manufacturers of custom acoustic panels, Conwed Designscape offers a great variety of products.

Expert Service
Conwed Designscape supports architects, designers, and customers through a nationwide network of sales professionals. Our team offers expert technical assistance in selecting the appropriate solutions for the specific acoustic challenges in your facility.
Pitch-Perfect Walls

At Conwed Designscape we offer thousands of fabrics to choose from so you can select the styles and colors that help you achieve both your aesthetic and acoustical goals. You will be impressed by the numerous finishes, edge treatments, and mounting techniques we offer.

- **Absorptive Panels** are popular for reducing reverberation.
- **Reflective Panels** enhance sound in performing arts venues.
- **Abuse-Resistant Panels** hold up to the rigors of active areas, such as gymnasiums.

Ceilings that Reach New Heights

Our custom ceiling systems consider all of your needs: acoustics, aesthetics, and ease of maintenance. With computerized, industry-leading design precision, we can transform any space to your new vision.

No-Hassle Building Maintenance

Conwed Designscape offers an effective mounting system that offers fast and easy pull-down access to the space above the ceiling.
Eurospan® Stretch Systems

A seamless acoustical solution designed for the ceilings and walls of any space. Now virtually any wall or ceiling can have outstanding acoustical performance, without the traditional look of fabric-covered panels. Eurospan® Stretch Systems are a complete acoustical system consisting of four main elements:

• A highly flexible wide span textile allowing for a seamless appearance that forms around curves, vents, and other cut-outs with ease.
• Proprietary track system that stretches the materials up to 16' for a monolithic look.
• System installation by certified professionals.
• High-performance integrated glass fiber core with a white matte face covering.

The result is a monolithic surface with outstanding acoustical properties. Eurospan® Stretch Systems merge unobtrusively with the interior design just as it blends perfectly with the architect’s imagination and the building owner’s needs.

Extraordinary Design

The Eurospan® advantage allows design of creative wall and ceiling features into a complete interior scheme. Eurospan® Stretch System textiles can be used as unique space dividers or custom printed backdrops. Our ceiling clouds can turn harsh overhead lighting into a soft, inviting accent. Ceiling and wall treatments can be designed with hidden backlighting for unique interior design elements. Color choices include Classic White, Vienna Crème, Theater Black, April Sky, or custom coloring using our special colorants, if desired, for a custom look that fits your interior palette.

Complete Flexibility

Eurospan® Stretch Systems easily accommodate spaces of any size and shape. Our special textile uses a locking knit-weave technique with integrity over the entire stretched surface. This means vents, lights, sprinklers, and other penetrations are never a problem.
Skyway™ Clouds

Conwed Designscape’s clouds provide a great harmony of acoustics, aesthetics, and design flexibility. Absorptive, translucent, and reflective clouds help define and tune your space. We offer a broad array of easy-to-install solutions as well as engineered options to fit your space and performance needs. You never have to sacrifice amazing aesthetics to achieve phenomenal acoustics.

Conwed Designscape’s Skyway™ Acoustical Clouds represent a great blend of acoustics, aesthetics, and design flexibility.

Skyway™ Clouds offer a broad array of easy to install solutions as well as engineered options to fit your space and performance needs.

Performance
- Designed with maximum performance in mind
- Acoustical performance supported by ASTM testing
- High light reflectance is available
- Absorptive, translucent, and reflective clouds help define and tune your space

Options

Why Skyway™?
- Sized to fit your space. Every order is custom made in our factory to your specific dimensions.
- Shapes and sizes can be combined to create larger and more elaborate designs.
- Colors and finishes to accent your space, mood, and design criteria.
- Ready-to-hang hardware system is available.
- Professional installation available on Skyway™ Engineered Clouds.
- FSC wood veneers available on Skyway™ Reflective Clouds.
Specialty Products
Any new or existing facility can meet specific acoustic, aesthetic, and architectural challenges. Our custom-designed specialty products provide added flexibility in solving those challenges.

Baffles
Conwed Designscape Baffles preserve the look of large spaces with high, open ceilings such as hallways, foyers, cafeterias, gymnasiums, auditoriums, and industrial arts areas. Our products control reverberation, reduce noise, and improve speech intelligibility throughout the space while adding an attractive, customized appearance. Baffles offer the same finishes as our wall panels and also arrive ready to install.

Diffusers
Our diffusers are custom-engineered acoustic products that are designed to absorb, reflect, or diffuse sound in music rooms, auditoriums, and other enclosed spaces. Diffusers and absorbers, like our other products, can be tailored to meet your aesthetic needs. The end result is a custom finish that blends seamlessly into your venue, and looks as good as it performs.
National Production. Local Faces.
A Representative will work with you every step of the way to convey your project-specific needs to our industry-leading technical and design teams. Set up an appointment with your local Sales Representative or the Company’s Technical Services Department to see how Conwed Designscape has transformed facilities like yours for many years.
